Counterfactual test manifest: fate of each source group

Built on the 1,060-tweet test split. A pair = *one tweet + one label-preserving identity swap. Groups bucketed by primary keyword (slur > proxy > religious).*

Swaps act only on Jewish religious-ethnic tokens. **Israel = 392, not 0**: these are "Israel"-keyworded tweets that *also* name Jews; the Jewish token is swapped, "Israel" is left untouched, and the filter accepts (rule 3). **Kikes / ZioNazi = 0**: a slur is present, so rule 1 rejects every candidate swap.
